Introduction:

The Ventilator is automatically driven by solar energy. It can also be driven by electricity supplied through the vehicle's cigarette lighter. Battery costs are thereby saved.

The ventilator can keep functioning when the vehicle is parked under sunlight even if the vehicle engine is powered since the ventilator is driven by solar energy. It helps to reduce vehicle's interior air temperature and remove driver's unpleasant feeling when turning on the vehicle engine after prolong parking.

The ventilator links the closed vehicle with outside world it moves sluggish

air inside the vehicle, drawing out door and bringing in fresh air. It brings extreme convenience to smokers by bringing in fresh air, which is invaluable especially to infant and the weak.

When sunlight gets weak, the ventilator can be alternatively driven by electricity supplied through vehicle's cigarette lighter, wind speed driven by electricity will be increased by twice (Luxe model)

The ventilator's outlook, shape, solar cell panel and fans are all

designed in strict compliance with safety standards, the safety of drivers and passengers, in particular the kids, are primarily observed to give assurance to parents.

Portable and easy to stall. Installation simply by winding down the glass of the

vehicle and fit the ventilator to the glass's peripheral once and for all

Stylish, durable, wind and water proof. The Ventilator will not be attacked by rainstorm. Water leakage is protected. It operates silently without any noise.

There is "on" and "off" plug, users can choose to use solar energy, electricity or turn off the ventilator.

The solar Ventilator is an environmentally friendly product. It promotes the latest trend of environmental protection.

Features:

- Use solar energy or Vehicle's electricity, No battery cost
