

ATLANTS

SUN-SONIC 800PLUS SOLAR

SOLAR BIRD & ANIMAL REPELLER

There would hardly be a vineyard, farm, vegetable and fruit fields etc... Which doesn't suffer losses due to birds and other animals? A large number of horticultural businesses suffer significant bird damage. Cherries, apple fruits, nuts, citrus, olives, berries, mangoes, lychees....the list seems endless. Tree crops as a rule are the hardest agricultural crop to protect from birds because of their physical size. A 30 foot high nut tree can have birds attacking above and below the canopy, same goes for cherries, apples and the like.

Highly prized crops like cherries and lychees for instance, require more protection than most other tree crops due to birds great fondness of them. In some cases where trees are large, protective sound may need to be directed both above and below the canopy to keep birds off and out of the trees. For many farmers, throw-over netting, as a method of crop protection, is economically unfeasible and canopy netting is even more expensive. In general netting is extremely expensive, both to buy and maintain and also to put up and take off again. Nets are often ineffective against some birds, spray coverage is also adversely affected by nets. Restricted airflow due to nets may contribute to higher incidence of disease. **Electronic bird & pest animal control has come a long way in the last 15 years and results are very impressive.**

Virtually all commercially significant pest bird species can now be effectively controlled with the newest high tech ATLANTS models at a fraction of the cost of netting and other systems without the huge labor., results and effectiveness of crop protection by ATLANTS are not in question.

Suitable for : Paddyfield, farms, vegetable and fruit fields, crops like rice, vegetables, cereals, watermelon as well as gardens, Backyards, open Patios, Courtyards, Boats, Docks, fisheries, campings etc.

Help to fight against pigeons, starlings, sparrows, gulls, woodpeckers, crows, blackbirds, grackles, cormorants, ravens and many other pest birds as well as deer, raccoons, armadillos, opossums, skunks, cats, dogs, rodents, bats, geese thanks to the multiple repelling system.

It can provide many functions selectable by user. It's the most versatile and effective bird and animal repellent on the market! Unlike other pest repellents that only offer one repellent mode, SUN SONIC 800PLUS offers three pest repellent modes to ensure your property is protected .

SONIC the SONIC mode uses a series of different pre-recorded sounds (GUN SHOT/SIRENS/BOAR SQUEAL /BANGING SOUNDS/DOG BARKING) that appeals to birds' and animals' auditory sense warning them of danger. This mode the perfect solution for deterring pest birds like pigeons.

ultrasonic/infrasonic sound waves – the ultrasonic/infrasonic mode uses a selectable scale of ultrasonic and infrasonic waves allowing you to set the frequency for the desired pest you wish to deter.

Combined – the combination mode uses both audible noises and ultrasonic and infrasonic waves along as well as led flash light to repel various unwanted pests and maximize effectiveness.

In addition, it offers night time protection. The built-in light sensor automatically switches the unit to LED lights only for continuous property protection.

Technical Parameters: Solar panel : 9V/150mA, monocrystalline silicon. Battery: 4*AA Rechargeable NI-CD 800mAh, 1.2 Volts.

Power Consumption: 0.2mA (standby) 80mA (working). Frequency Range: 12Hz – 35KHz. : 1pcs in one box, 12 PCS in one master carton box. Unit size 31x16 x14 cm. Gross weight: 1.5 Kg/unit. Material: ABS & ALUMINIUM. Coverage: up to 250m2

SOLAR POWERED
